Perfect solution against moles

The anti-mole net offers an ideal protection against moles on grassy fields such as football- and playgrounds, golf courts or gardens. Placed on the ground before placing/seeding the lawn will prevent mole activities in the covered area.

Benefits

There are many ways to protect against moles, but the most reliable solution is to install a movement that physically prevents the mole from destroying our garden.

Characteristics

Sandy structured soil is applied over the fastened net to the depth of 5-8 cm. We suggest compacting the surface with a roller. The edge of the overlap is a minimum of 10-15 cm. It is useful to fasten the edges and the overlaps with Fixsol metal pegs. Around flowerbeds, trees, borders you need to round up the net in L shape. After placing the mole net you can plant new plants by cutting an X shape but you need to fasten the net here as well.
